Hotel Booking — Reservation Requirements

1. *Introduction*

The booking engine is used by the public website and the call centre.

Room inventory is synchronised nightly from the property system.

2. Functional requirements

REQ-1: *The system shall show available rooms for the selected dates and number of guests.*

Acceptance criteria:

• Rooms with no availability on any selected night are hidden.

REQ-2: The system shall not allow a check-out date earlier than or equal to the check-in date.

Acceptance criteria:

• Same-day check-out shows a validation error.

REQ-3: The system shall allow free cancellation up to 48 hours before check-in.

Acceptance criteria:

• Cancellation 49 hours before is free.

• *Cancellation 47 hours before charges one night.*

REQ-4: The system must hold a reservation for 15 minutes while payment is in progress.

Acceptance criteria:

• After 15 minutes without payment the hold is released.

REQ-5: The system shall display prices in the currency selected by the guest.

Acceptance criteria:

• Switching currency updates all prices on the page.
